

Data Analytics Simulation: Strategic Decision Making Simulation Case

Data-Driven Management of Blue Detergent

Kelsey-White (K-W), an American multinational consumer goods company, manufactured and sold a variety of consumer packaged goods (CPG) around the world – generally through brick-and-mortar retailers. In the United States, laundry detergent was a key product for K-W in the form of Blue, its primary brand. Blue came in several formulations – liquid, powder, and single-use pods (see Exhibit 1) – and had been a staple of the laundry marketplace for several decades. Pod sales had been slow compared to other competitors, and long-term Blue customers sometimes even felt that liquid was too modern for their tastes. As the average age of its customers rose, Blue’s market share drifted downwards over the past several years. The product was still a profitable one for K-W, however (see Exhibit 2), as the market as a whole had enjoyed steady growth.

K-W had historically been a relatively conservative company in which most marketing and manufacturing decisions were made on the basis of experience and gut feel about the market. However, four years ago the company appointed a relatively new CEO, Sheila James, who had a strong belief in quantitative and data-based decision-making. One of her first acts as CEO was to initiate the development of K-W Vision, a system for displaying key information about market, financial, and operational performance. James’s goal was that K-W managers would use Vision to make strategic and operational decisions in many areas of the business. She had come from another company in the consumer products industry, and she argued that K-W was behind other firms in its use of data and analytics for decisions. Vision had just become available to the Blue product team.

In order to build K-W Vision, the company needed to compile several years of historical data. Most of it came directly from retailers, from syndicated providers of retail data about CPG firms, or from internal K-W systems. Much of the data had been used within K-W in the past, but it was fragmented and stayed within a variety of business silos. In addition, some parts of the organization were much more likely to use such data than others.

With strong support from Sheila James, the IT organization at K-W had put substantial energy and time into integrating the information, ensuring that it was consistent across the organization, and creating

This case was prepared by Professor Thomas H. Davenport for the sole purpose of supplementing the use of *Data Analytics Simulation: Strategic Decision Making* (HBP No. 7050). This text and the simulation are developed solely as a basis for class discussion and are not intended to serve as endorsements, sources of primary data, or illustrations of effective or ineffective management.

the Vision user interface. The goal of these efforts was to allow K-W managers to make key decisions about marketing and production based on analysis of “what works” as evidenced by data. The system also included data on key competitive brands, which was generally sourced from annual reports and syndicated industry data. The most recent version also employed some sophisticated Monte Carlo simulation analyses to understand the likelihood of different forecasting scenarios.

James was also attempting to change the culture of K-W in a more analytical direction. Her idea was that every manager within the company should become a data-driven executive, making key decisions on the basis of data and analytics whenever possible. She also believed that analytics and K-W Vision would be essential in pulling off the turnaround necessary for Blue and other key brands. She has made clear that decisions need to be described simply and clearly, and justified with reference to the data and analyses used to make them, and regularly posed questions involving data about brand and business unit performance at management meetings. She had also suggested that managers who adopted this data-driven approach would be the most likely to succeed and be promoted at K-W in the future. In fact, James had accelerated this process by bringing in several new managers from outside the company who already had the desired analytical orientation.

In keeping with this analytical focus, Blue and other K-W brand teams had already seen their key resources tied to gains (or losses) in market share and profitability. James and other senior managers had made clear that brands that did well would receive more money for marketing and for increased production, and those that did not would be slowly starved of resources.

For the managers of the Blue brand, the new administration and the new tools provided an opportunity to reshape the brand and consumer perceptions of it in the marketplace. Blue had been known as a solid but unexciting brand in the marketplace; some have called it the “Ivory Soap of detergents.” James and other managers had suggested to analysts that they thought Blue could be revitalized, and were open to suggestions from the brand team about how best to do that.

Blue’s primary competitor in the category was Turbo, a souped-up and heavily advertised brand that promised more cleaning power. Customers had responded well to that message, and Turbo had almost half the US detergent market. Turbo had invested its marketing resources across a variety of channels, but almost 35% of its spending was on digital ads – perhaps the highest digital spending percentage in the industry. K-W managers speculated that Turbo’s brand managers were increasingly focused on the millennials market segment. Turbo’s greatest sales were through large retailers like Walmart and Target, although it was also the brand most likely to be found in small urban stores. Turbo’s price to retailers was the highest of any competitor (see Exhibit 3). It had also been the first to introduce higher-priced formulations (liquid and pods) into the marketplace, and it had achieved success in persuading customers to purchase them.

Another competitive brand, Fresh, came from a Europe-based manufacturer. It had slightly larger share in the market than Blue, and its brand attributes centered on a fresh, clean smell for the clothes washed in it. Fresh’s brand managers had also said in industry journals that they wanted to increase its appeal to younger consumers. Its marketing strategies, however, were not youth-oriented to external appearances. It had a strong television focus, and still bought ads disproportionately on daytime television. Fresh’s strongest distribution channel was mid-sized grocery chains. Its price to the channel was lower than Turbo’s, but higher than Blue’s. Most of its sales were in the traditional powder formulation.

The only other major brands in most stores were generic store brands, which competed largely on price. K-W did manufacture detergent used in some store brands, but it did not advertise that fact and did not work closely with stores to try to build those brands.

Sheila James recently told Wall Street investment analysts, “Our fortunes in the detergent category will rise and fall on Blue. We have high hopes for that turnaround and believe that our data-driven approach will ultimately grow the brand dramatically.”

Exhibit 1

Laundry Detergent – Formulation Choices

Laundry Detergent Formulations			
Formula	Variable Costs Effect	Customer Perceptions	Primary Customer Segments
Powder	No change	Classic option Dependable Affordable	Lower income Older
Liquid	+ 7%	Standard option Easy use Universally used	Low to average income Middle aged
Pod	+ 15%	Most modern option Most convenient Premium	Wealthier Younger

Exhibit 2

Blue's Income Statement (Year 1–Year 4)

Blue Laundry Detergent				
Income Statement				
(in millions)	For the Year Ended December 31,			
	<u>Year 1</u>	<u>Year 2</u>	<u>Year 3</u>	<u>Year 4</u>
Revenue	<u>\$178.2</u>	<u>\$179.7</u>	<u>\$196.7</u>	<u>\$225.3</u>
Costs				
Variable Costs	53.5	53.9	59.0	67.6
Fixed Costs	87.0	87.0	87.0	87.0
Other Costs	<u>30.0</u>	<u>29.7</u>	<u>30.0</u>	<u>32.9</u>
Total Costs	<u>170.5</u>	<u>170.6</u>	<u>176.0</u>	<u>187.5</u>
Operating Profit	<u>7.8</u>	<u>9.1</u>	<u>20.7</u>	<u>37.8</u>
Cumulative Operating Profit	<u>\$ 7.8</u>	<u>\$ 16.9</u>	<u>\$ 37.6</u>	<u>\$ 75.4</u>

Exhibit 3**Laundry Detergent Industry Competition**

Laundry Detergent Industry Competitors: Year 4 Snapshot				
	Blue	Turbo	Fresh	Store
Market Share	11.0%	44.1%	26.3%	18.6%
Channel Price (per 100 units)	\$7	\$10	\$8	\$6
Promotional Strategy	Average All channels	Heavy All channels (emphasize digital)	Heavy Primarily TV	None
Customer Perception	Traditional	Innovative	Old-fashioned	Affordable
Target Placement	All stores	Convenience, Mass	Grocery	All stores
